

# Repair Care Training

TOTAL JOINERY REPAIR SOLUTIONS

# Repair Care Training

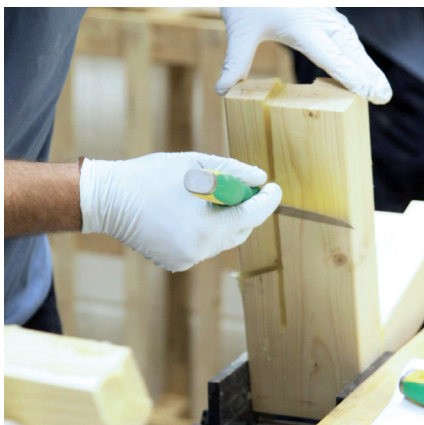

The basic principles of the Repair Care system are very simple - Prepare, Repair and Prevent. To ensure that contractors understand the Working Methods and how to get the best results first time, every time, we organise practical training courses for painters, decorators, joiners, builders etc at various locations and in some circumstances this training can be arranged on site. On the successful completion of the course trained operatives are issued with a certificate and personal Repair Care card. These are valid for 4 years, after which half price Refresher Courses are available.

## Trained Contractor Course

The Trained Contractor Course consists of a mixture of theoretical and practical elements, with the emphasis very much on 'hands-on' experience. Information about the causes of timber decay will be discussed along with an overview of how to identify and assess existing damage. Following an introduction to the range of Repair Care systems, all delegates will have the opportunity to extensively use the tools and products needed to achieve a perfect repair. The course includes light refreshments and all delegates will take away full product and system information and their own sample window sections from the practical session.

## Agenda

### Introduction:

- Product characteristics and uses
- Causes of decay
- Why repair: the benefits of conservation
- Traditional repairs

### The Repair Care system:

- Product range
- Repair Care Working Methods
- How to inspect the property
- Repair Care costing sheet
- Health & Safety

### Practical

- Preparation
- Demonstration of tools & products
- Standard product application & finishing
- Demonstration of additional repair methods

### Business opportunities

- Unique 10 year guarantee
- Costing a project
- Marketing support and material

"The Repair Care epoxy resin system is an essential part of our restoration service. We specialise in restoring and servicing sash windows, predominantly in listed buildings. The system allows us to make spot repairs on site where traditionally the unit may have had to be removed and taken to the work shop. This not only speeds up the job - but keeps remedial costs down for the client. The Trained Contractor Course taught us everything we needed to know."

Dan Green - Dan Sash Renovations

# Advanced Contractor Course

The Advanced Contractor Course is suitable for contractors who have completed the Trained Contractor Course and wish to refine their DRY FLEX® and DRY SEAL™ skills further and for those that wish to specialise in historic joinery restoration and conservation. The course is challenging and practical, resulting in the production of a display model showing a comprehensive range of DRY FLEX® and DRY SEAL™ repairs and the contractor's skill and dexterity. The course includes light refreshments and all delegates will take away their own sample window from the practical session.

## Agenda

### Introduction:

- Presentation of repairs and other substrates
- Upgrading existing windows, including retro-fitting of double glazing
- Metal & masonry repairs

### Practical session 1:

- Copying moulding and cutting profiled blades
- Glazing bar repairs
- Conservation joint repairs

### Practical session 2:

- Splice repairs
- Repairs to split hinges
- Additives and tinting of DRY FLEX®
- Advanced DRY SEAL™ techniques

### Review of the day and questionnaire

- Recap of repairs
- Discussion about future projects

"Although I am an experienced and proficient user of Repair Care products, the Advanced Course has given me the confidence and skills to take on more complex repairs. Having earned thousands of pounds doing timber repairs that I'd otherwise have to pass onto carpenters it made good business sense to go on the Advanced Course to extend my skills and extend the type, speed and efficiency of my resin repairs. Fantastic course and great value for money!"

Charlie Budd - Charles Budd Decorating

## Bespoke Training Courses

For larger groups, we can tailor training to the needs of your business. Whilst it is still important to cover all the core elements of preparation and application, modules can be added to include extended practical sessions covering DRY FLEX® repairs, DRY SEAL™ application techniques and responsive maintenance & internal repairs. Bespoke training courses can be arranged on site or at one of our training venues, and trainees will be issued with appropriate certificates.
